S1  
HIV/AIDS can hit anyone. You can't tell someone is HIV positive just by looking at him.

---

S24

**HIV is not transmitted by:**

Mosquito bites, eating together, shaking hands, kissing, spitting, washing the clothes of an infected person, sharing soap or washing together, using local transports, latrines.

---

S25

There is no reason to fear a person who has the virus! HIV is only transmitted through blood and sex. A HIV positive person can work and live normally among others and needs support of family and friends.
